

Claims

1. Method for adapting the configuration of at least one application of a mobile terminal device to an accessible data connection, by the steps of:
 - 5 - obtaining properties of at least one data connection accessible from said mobile terminal device; and
 - adapting the configuration of said application on said terminal device in accordance with said properties.
- 10 2. Method according to claim 1, wherein the only available property comprises the identification of said data connection.
3. Method according to claim 1 or 2, wherein said properties are obtained when a specific data connection is selected.
- 15 4. Method according to anyone of the claims 1 to 3, wherein said at least one accessible data connection is a potentially accessible data connection.
5. Method according to anyone of the claims 1 to 4, further comprising the step of determining actually accessible data connections, and wherein said properties are obtained during said determination.
- 20 6. Method according to anyone of the preceding claims, further comprising the step of determining active applications, and adapting the configurations of said determined active applications.
- 25 7. Method according to anyone of the preceding claims, further comprising the step of starting an application on a mobile terminal device prior to obtaining said properties.
- 30 8. Method according to anyone of the preceding claims, further comprising the step of detecting a data transfer to be performed by an application, prior to obtaining said properties.
9. Method according to anyone of the preceding claims, further comprising the step of selecting an appropriate data connection.
- 35 10. Software tool for adapting the configuration of an application of a mobile terminal to an accessible data connection, comprising program code means for carrying out the steps of

anyone of claims 1 to 9 when said program is run on a mobile terminal device.

5 11. Computer program for adapting the configuration of an application of a mobile terminal to an accessible data connection, comprising program code means for carrying out the steps of anyone of claims 1 to 9 when said program is run on a mobile terminal device.

10 12. Computer program product comprising program code means stored on a computer readable medium for carrying out the method of anyone of claims 1 to 9 when said program product is run on a mobile terminal device.

13. Mobile terminal device capable of adapting the configuration of applications to an accessible data connection, comprising:

- data exchanging means, capable of accessing at least one data connection;
- data processing means, capable of running applications;
- 15 - means for obtaining properties of at least one data connection accessible by said data exchanging means; and
- means for adapting the configurations of at least one application according to said obtained properties.

20 14. Mobile terminal device according to claim 13, further comprising means for selecting one of said at least one accessible data connections.

25 15. Mobile terminal device according to claim 13 or 14, further comprising means for storing said configurations of said applications for said at least one accessible data connection.
